

We solve the problem of dirty roads & highways

HMA Techniplan are the exclusive agents in Australia / New Zealand / New Guinea / New Caledonia and Fiji for MobyDick Wheel Washing Systems.

Mobydick Wheel Washing System is a division of FRUTIGER. FRUTIGER AG is based in Winterthur Switzerland and have over 3000 units installed world wide, and with over 25 years of experience are able to provide you with a perfect solution to your problem of dirty and contaminated roads no matter what the site conditions. MobyDick have eight base models with an extensive range of design variations to meet individual customer needs.

Understanding the particular problem is the starting point in putting together the suitable MobyDick System.

...We provide you with a perfect solution to your problem of dirty and contaminated roads no matter what the site conditions.

Next to the highly effective cleaning performance, the water treatment plays a decisive part in the success of a Wheel Washing System. The wash water in all MobyDick Systems is re-circulated for further use. The water treatment is achieved either through the addition of a flocculent and automatic sludge-evacuation with a scraper conveyor or with large settlement tanks which may be used without flocculent addition.

MobyDick Wheel Washing Systems are used in many various applications:-

- Waste Management
- Landfill
- Coal and hard rock mining
- Aggregates
- Livestock and botanical disease isolation
- Reclamation of fertilisers
- Construction including road and building

Moby Dick Wheel Washing Systems

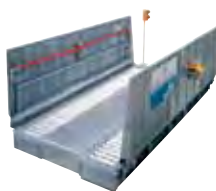

Junior

The compact roller unit for job sites and smaller landfills. Even sticky sludge between the dual wheels and in the tyre profiles will be completely washed out. Uncomplicated and rapid installation makes it also suitable for short-term applications.

Duo

The MobyDick Duo is a roller unit capable of washing two axles simultaneously, therefore decreasing the total wash time per truck.

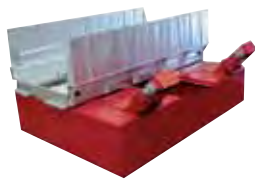

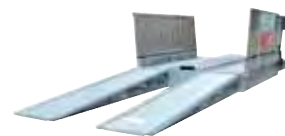

Quick 400/667/939

The MobyDick Quick is the classic, robust, fully hot-dipped galvanised drive-through washing system. The standard lengths 400/667/939 combined with the appropriate pump performance ensure the desired wash power.

Mobile

The MobyDick Mobile can be used in all situations where ground-excavation is not allowed or desired. Wash Element – Ramps – Recycling Tank! That's all it takes for your mobile solution.

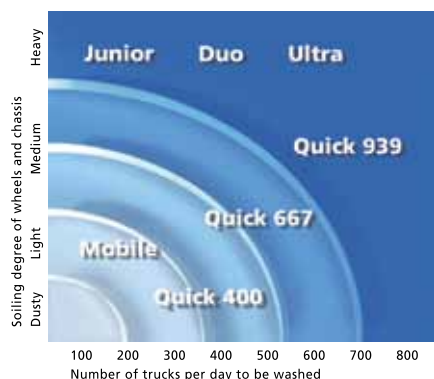

Ultra

The MobyDick Ultra is a special unit that is individually custom-designed to meet a customer's particular requirement. As a combination of the roller and drive through technology and/or with an extreme pump performance, it is capable of washing a high volume of extremely soiled trucks.

Dragon

The MobyDick Dragon is based on a patented concept consisting of a wash area and integrated water treatment with automatic sludge evacuation. It is suitable for both short and long term operations and absolutely unbeatable in respect to value for money.
